(54) Title: METHOD AND APPARATUS FOR INTEGRATING A WIDE KEYBOARD IN A SMALL DEVICE

(57) Abstract: The invention relates to a method and an apparatus for using a wide keyboard including a wide range of keys in small mobile devices. A method relates to operating a mobile device having a touch sensitive display divided in input and output portions (200). A first location of a tactile input is detected (201) on an input portion of the touch sensitive display displaying a plurality of keys. Next the input portion display view is zoomed (203) by displaying and linearly magnifying the detected tactile input area and it's surrounding. A second location of a tactile input is detected (204) and a key on the location of a second detected tactile input (204) is highlighted (205). The highlighted key (205) is activated (206) and identified as an input.
